UPDATE version 1.2.0

(only for version 1.1.1, **If your version is 1.0.2 than please read Update 1.1.0**)

Follow the steps bellow to update your template only if you have an earlier version (for example you have version 1.1.1)

STEP 1

IMPORTANT !!! First create a back-up your current SYNERGY version!!!

STEP 2

Open the file "mc.modules.animation.js" from the folder "js" with any text editor.

1) Select all text from **"/* start ready function */"** (line 26) until the end**(/*----------------- end Utils Methods --------------------*/**) and delete it.

2) Open the NEW **mc.modules.animation.js** from v1_1_0 and select again the text from **"/* start ready function */"** until the end.

Copy the text and paste it in your current JS file(**1)**).

Save the file(don't change the file name).

STEP 2

Open the file "style.js" from the folder "css" with any text editor.

There are 2 ways of updating this:

1) Overwrite the your CSS file with the new one and change again the themeColor.

2) Open your style.css file and select all from (line 559):

```
/* ============================ 2.1 SLIDESHOW ======================= */
```

until the end and delete it.

Open the new style.css file from version 1.2.0 and select all from line 559 until the end. Copy the selection and paste it into your CSS file.

Find the class: `.home-layout-clients a` (in your CSS file) and replace the color with your own themeColor

Save it and update the server.

IMPORTANT!!! **If you have added new code into the style.css file than open your back-up file and add them again in the updated file.**

STEP 3

Open the file "about_us.html" from the folder "html/about_us/"(from version 1.2.0) with any text editor.

Open your "about_us.html" file(or the one where you want to use multiple backgrounds) and add the "**data-time**" and also the selected div tags. The **data-time** is the number of seconds you want to pass until the backgrounds rotate.

Repeat the process for all modules where you want multiple backgrounds.

STEP 4

Open the file "home_layout_1.html" from the folder "html/home/"(
from version 1.2.0) with any text editor:

```
    </div>
</div><!-- end #menu-container -->

<div id="module-container"><!-- start #module-container -->
    <div id="slideshow" data-auto-play="false" data-time="4">
        <div class="slideshow-slide">
            <img src="assets/media/home/home_layout1/images/image1.jpg" onload="onFirstMediaLoaded()"  ic
            <div id="slideshow-captions">
                <div id="slideshow-captions-text">
                    <p>WE CREATE! YOU DELIVER!</p>
                </div>
                <div id="slideshow-captions-text">
                    <p>SYNERGY INTERACTIVE &amp; RESPONSIVE TEMPLATE</p>
                </div>
            </div>
        </div>
        <div class="slideshow-slide">
            <div id="slide-src" data-src="assets/media/home/home_layout1/images/image2.jpg"></div>
            <div id="slideshow-captions">
                <div id="slideshow-captions-text">
```

Open your "home_layout_1.html" file(or the one where you want to use timer for the slideshow) and add the "**data-auto-play**" and also "**data-time**"

data-auto-play = false to not use auto play or true to use it

data-time   = the number of seconds until the images change

STEP 4

Open the file "**4_columns_projects.html**" or "**3_columns_projects.html**"
or "**2_columns_projects.html**" from the folder "html/our_projects/"(
from version 1.2.0) with any text editor:

See how we have added the 2 selected filters: **photography** and **design**
also notice that there is a space between them.

Go to your column projects HTML files, open them and edit the **data-id**
with how many filters you want but make sure you leave a space
between them.
